Abstract

Addition between prepositions is one of the most complicated grammatical phenomena. The scientists/scholars differed & had various views between assistant, rejection & opposition.

As for the first team it sound that the verb has an additional meaning with preposition but the other team rejected that and said that replacement of a prep. in the place of another occurred due to their similar meanings.

Following the Hadeeths up in Saheh Al-Bokhari and applying the theoretical study on them I found the Hadeeth divided into several sections. Some have verbs had another meaning when they have preps, and other give the prep its original meaning. And the last when the prep. replaced the other.

And as a result of that following up the first views is the correct one and it assures that replacement of some prep. is rare and limited in certain cases.
